

DANAR PRIYO UTOMO

BACKEND DEVELOPER • PROBLEM SOLVER • SYSTEM BUILDER

HELLO! I'M DANAR PRIYO UTOMO

A backend-focused web developer passionate about building impactful and scalable digital solutions. My journey in technology started in junior high school, where I began exploring PHP, HTML, and database management through hands-on projects. Since then, I have continued developing my skills through real-world experiences in web development, REST API integration, system management, and data-driven applications.

I enjoy solving problems, collaborating with teams, and turning ideas into functional systems that provide real value. With experience in leadership, project management, and backend development, continuously learning and growing to become a versatile technology professional.

I have many ideas I want to share with the world — some impactful, some crazy, but all meaningful in their own way.

EDUCATION

JAKARTA STATE UNIVERSITY, 2023

Expanded my experience in backend development, system integration, and data-driven applications through academic projects, organizational leadership, and real-world internships. Actively involved in student organizations, project collaborations, and technology-based problem solving.

IKM DISPERINDAG RIAU

BUSINESS PROJECT
YEAR : 2020
ROLE : BACKEND DEVELOPER

KEPRIPROV RIAU Website

My first step into professional web development. Through this project, I learned how to build and maintain web-based systems, manage data effectively, and transform requirements into functional features that support daily operations.

Tech Stack :
PHP • MySQL • HTML • CSS • JavaScript • Bootstrap

Problem Background :

The organization required a more efficient way to manage **employee information**, **website content**, and **administrative data**. Processes such as updating employee profiles, managing news articles, and maintaining organizational records were handled manually, making data management **time-consuming** and prone to **data inconsistencies**. To address these challenges, a **centralized web-based administrative platform** was developed to streamline content management and improve operational efficiency.

What I've Learned :

Through this project, I gained hands-on experience in **database management**, **CRUD operations**, and **web application development** using PHP and MySQL. I learned how to design **efficient database structures**, implement **media upload functionality**, and build **user-friendly administrative interfaces**. More importantly, this project strengthened my understanding of **real-world software development workflows**, **problem-solving**, and **collaboration** within a development team.

E-BENGKEL

BUSINESS PROJECT			
YEAR : 2025			
ROLE : BACKEND DEVELOPER			

ONEGARAGE WORKSHOP

Not Deployed Yet

E-Bengkel is a web-based automotive management system designed to streamline operational processes across workshops and branch stores. The system supports inventory management, spare part tracking, order processing, inter-branch transfers, and employee administration through integrated REST APIs.

Tech Stack:
 PHP • MySQL • REST API • JavaScript •
 Bootstrap • HTML5 • CSS3

Problem Background:

Managing **thousands of spare parts, inventory records, and order transactions** across multiple workshop branches presented significant operational challenges. Data was often distributed across different locations, making stock monitoring, order tracking, and inter-branch transfers inefficient and prone to inconsistencies. To address these issues, a **centralized automotive management system** was developed to synchronize information between warehouses and branch stores, improve **inventory visibility**, and streamline day-to-day business operations.

What I've Learned:

Through this project, I gained hands-on experience in **backend development**, **REST API integration**, and **system architecture** within a real-world business environment. I learned how to design and manage systems that handle **thousands of spare part records**, synchronize data across multiple operational units, and support critical business workflows. Working on inventory management, transfer systems, employee administration, and order processing strengthened my understanding of **database design**, **API-driven communication**, and **scalable business applications**. More importantly, this project taught me how technology can improve efficiency and reliability in large-scale operational processes.

SIXKUL

ACADEMIC PROJECT
YEAR : 2025
ROLE : BACKEND DEVELOPER
TEAM : DANAR PRIYO UTOMO, DANDY ARYA AKBAR

UNIVERSITAS NEGERI JAKARTA Not Deployed Yet

Sixkul is a web-based extracurricular management platform designed to help schools organize and manage extracurricular activities. The system provides administrative tools for managing activities, participants, and related information through a centralized dashboard.

Tech Stack :
Next.js • React • JavaScript • MySQL •
HTML5 • CSS3

Problem Background :

Schools often manage extracurricular activities through **multiple spreadsheets**, documents, and manual administrative processes, making information difficult to organize and access. Sixkul was developed as a **centralized extracurricular management platform** to **streamline activity administration, improve data accessibility, and provide a more efficient experience** for both administrators and students.

What I've Learned :

Sixkul marked my first experience working with **Next.js** and **modern web development** practices. Through this project, I learned **component-based architecture, dynamic routing, and how to build scalable web applications** using a **modern React framework**. I also gained experience in **frontend-backend integration, database connectivity, and collaborative development workflows**. As my first **Next.js** project, it expanded my understanding of modern web development beyond traditional PHP-based applications.

SIAP-PPKB JR

YEAR : 2026

ROLE : PROJECT MANAGER, QUALITY ASSURANCE, AND BACKEND DEVELOPER
TEAM : DANAR PRIYO UTOMO, DANDY ARYA AKBAR, DERIC NAVINO

JASA RAHARJA Not Deployed Yet

A web-based analytics and monitoring platform developed to support vehicle tax arrears analysis, operational monitoring, and data-driven decision-making through interactive dashboards, reporting features, and geographic visualization.

Tech Stack :

Next.js • React • MySQL • JavaScript • REST API • Data Scraping • Chart Visualization

Problem Background :

Managing and analyzing over **5 million vehicle-related records** across multiple operational units presented significant challenges in **data accessibility, monitoring, and decision-making**. Critical information was distributed across **various sources, making trend identification, performance tracking, and reporting processes inefficient**. To address these challenges, **SIAP-PPKB** was developed as a **large-scale monitoring and analytics platform** consisting of **10+ integrated modules**, enabling **centralized data management, operational monitoring, arrears analysis, geospatial visualization, and data-driven decision support** for multiple business divisions.

What I've Learned :

As both a **Project Manager** and **Technical Contributor**, this project strengthened my ability to bridge leadership and software engineering responsibilities within a large-scale system. I **coordinated development activities, managed project requirements, facilitated communication between stakeholders and developers, and ensured feature quality through structured testing processes**. From a technical perspective, I gained hands-on experience in **backend architecture, data processing, quality assurance, and designing systems** capable of handling **millions of records**. Most importantly, I learned how to transform **complex operational data** into **actionable insights** that support organizational decision-making.

SIGNSYNC

YEAR : 2026

ROLE : MACHINE LEARNING & COMPUTER VISION DEVELOPER

SELF PROJECT Future Project

SIGNSYNC is a real-time sign language translation application that leverages computer vision and machine learning to recognize hand gestures and body movements through a webcam. The system translates sign language into digital outputs, aiming to improve accessibility and communication through technology.

Tech Stack :

Python • OpenCV • MediaPipe • Scikit-Learn • NumPy • CustomTkinter • Pillow

Problem Background :

Technology becomes most meaningful when **it helps people connect**. Inspired by **Twinkling Watermelon** and its portrayal of **communication barriers** within the deaf community, I developed **SIGNSYNC** to explore how **computer vision** and **machine learning** could enable **real-time sign language translation** and **support more inclusive communication experiences**.

What I've Learned :

Through this project, I gained hands-on experience in **computer vision**, **machine learning**, **real-time data processing**, and **application architecture**. I learned how to extract **skeletal landmark features** using **MediaPipe**, train classification models with **Scikit-Learn**, optimize inference workflows, and integrate machine learning systems into user-facing applications. More importantly, this project helped me develop a deeper appreciation for **accessibility-focused technology** and the communication challenges faced by the **deaf and hard-of-hearing community**, reinforcing my belief that technology should be **inclusive and meaningful for everyone**.

Future Vision :

In the future, this project could be adapted for **edge devices** and **wearable platforms** such as **Meta Smart Glasses** or **Apple Vision-based ecosystems**. By combining **lightweight machine learning models**, **real-time landmark detection**, and **augmented reality interfaces**, the system could provide instant sign language interpretation directly within the user's field of view.

PERSONAL SKILLS

PROBLEM SOLVER

Enjoy solving complex problems and turning ideas into practical digital solutions.

FAST LEARNER

Passionate about learning new technologies and continuously improving technical skills.

CRITICAL THINKING

Able to analyze situations logically and make effective decisions under pressure.

LEADERSHIP

Experienced in leading teams, coordinating projects, and maintaining effective collaboration.

TEAM COLLABORATION

Comfortable working with teams and adapting to collaborative development environments.

COMMUNICATION

Strong communication skills developed through leadership and debate competitions.

CERTIFICATES

1ST PLACE – BIOSELOM NATIONAL DEBATE COMPETITION 2024

AWARDED 1ST PLACE IN A NATIONAL-LEVEL DEBATE COMPETITION, DEMONSTRATING STRONG CRITICAL THINKING, PUBLIC SPEAKING, AND ARGUMENTATION SKILLS.

PARTICIPANT – ZFL INCUBATION PROGRAM 2024

PARTICIPATED IN AN INNOVATION AND INCUBATION PROGRAM FOCUSED ON DEVELOPING ENTREPRENEURIAL MINDSET, PROBLEM-SOLVING, AND PROJECT DEVELOPMENT SKILLS.

1ST PLACE – MOBILE LEGENDS DEAN'S CUP 2023

SECURED 1ST PLACE IN A UNIVERSITY ESPORTS COMPETITION THROUGH EFFECTIVE TEAMWORK, COMMUNICATION, AND STRATEGIC DECISION-MAKING.

CERTIFICATE OF APPRECIATION – FORMER HEAD OF CADRE DEVELOPMENT DIVISION, BEMP 2025

RECOGNIZED FOR LEADERSHIP AND CONTRIBUTIONS IN MANAGING MEMBER DEVELOPMENT PROGRAMS, ORGANIZATIONAL ACTIVITIES, AND STUDENT ENGAGEMENT INITIATIVES.

1ST PLACE – FESCOM DEBATE COMPETITION 2024

ACHIEVED 1ST PLACE IN AN ACADEMIC DEBATE COMPETITION, SHOWCASING ANALYTICAL REASONING, TEAMWORK, AND PERSUASIVE COMMUNICATION ABILITIES.

1ST PLACE – MEN'S BASKETBALL DEAN'S CUP 2023

WON 1ST PLACE IN A UNIVERSITY BASKETBALL TOURNAMENT, DEMONSTRATING TEAMWORK, DISCIPLINE, AND COMPETITIVE SPIRIT.
